

Multifunction Calibrator of alternating and direct voltage and current

The C101F Calibrator enables generating direct (DC) and alternating (AC) voltages up to 1100V in five subranges 0,1-1-10-100-1000V, DC and AC currents up to 20,5A in five subranges 0,001-0,01-0,1-1-10A (the C101FC option up to 100A AC). Frequency of alternating signals may be chosen from values 50Hz (synchronized with power supply frequency), 60Hz, 400Hz or can be programmed in range 45,00...2000Hz. Output signal can be set by means of external keyboard or by standard interface RS232C from PC computers.

The C101F Calibrator is characterised by high accuracy, high output power, small dimensions and light weight.

C101F

C100F DC and AC Voltage and Current Multifunction Calibrator

- Voltage source up to 1100V
- Current source up to 20A
- Small dimensions and light weight – 13kg
- High output power
- Option C101FC with 100A AC subrange
- Option C101FB with 40VA power at 20A AC/DC
- Interface RS232C
- Software Calpro 101

How do you choose calibration set for testing voltage and current meters?

Meter under test accuracy class [%]

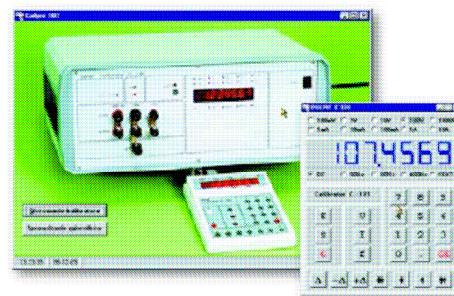

Set of medium accuracy Calibrator and high accuracy DMM are a low cost and more versatility solution

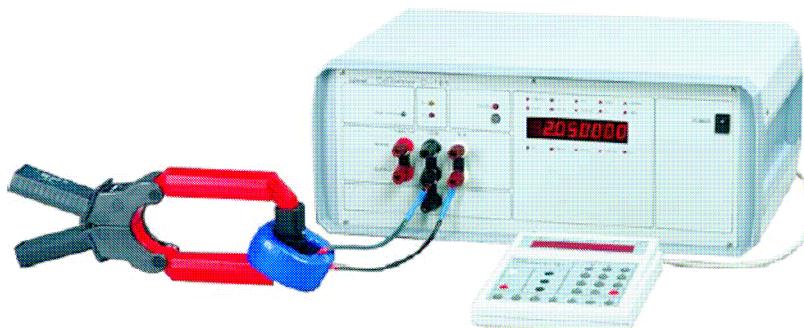

SOFTWARE CALPRO 101

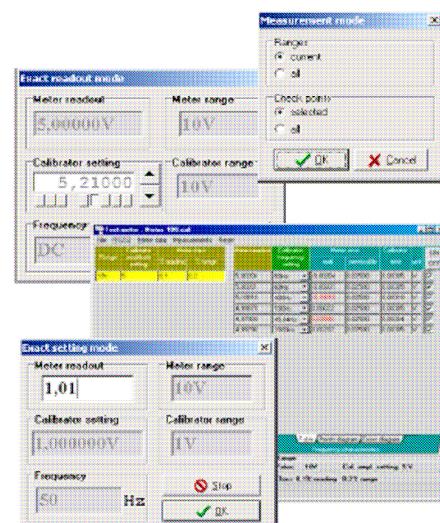

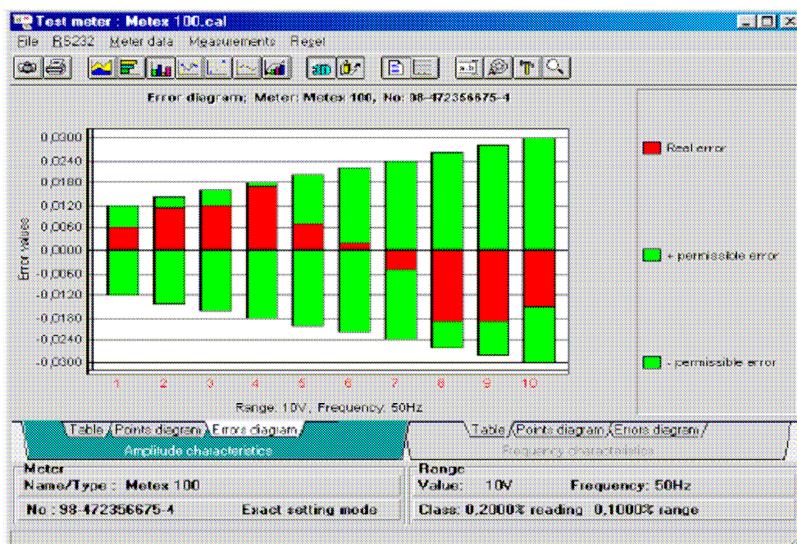

- simulation of calibrator's keyboard by means of PC computer

- computer-aided analog and digital devices testing – measurement procedures, editing tables of measurements with automatic errors calculation of testing devices, creating database

Set for checking DC and AC clamp meters

- graphical visualisation of measurements in the form of tables and various charts
